## Ocean Shipments Report

### Proprietary Ocean Data

With SONAR's Ocean Shipments Report (OSR) app, subscribers have data not available anywhere else. The OSR enables subscribers to **view ocean container volumes 7 days in the future on both containerized U.S. imports and exports.**

The OSR is one of the best leading indicators ever brought to market. International container volume that lands at a port turns into freight and cargo stored in U.S. warehouses and is then shipped across the country via truck and/or intermodal rail. Using the OSR you can capitalize on this information to find capacity and reduce freight costs, increase your profits and service your customers better.

### Pivot to Proactive

The OSR transforms the way you will make decisions about capacity planning near major ports. Until now, available ocean shipments information was lagging data, generally unhelpful for planning. Now you can proactively plan, using the OSR app to see which ports will receive high volumes - indicating less capacity and higher trucking/intermodal rates or lower volumes, leading to more capacity and lower freight rates.

Be the first to know what is coming into port and how to profit from it. With the OSR app, SONAR subscribers can now see how much freight will arrive in or leave from specific ports before anyone else.

## Top 100 Cosignees By Volume

With the 100 Consignees dashboard, it is easy to see why the SONAR Ocean Shipments Report is the best indicator available to gauge how much ocean container volume is being booked for U.S. imports. See which companies are the 100 largest consignees by shipment volume - as well as where the imports are coming from and where in the United States those shipments are heading.

SONAR's Ocean Shipments Report allows companies in all modes to "read the future" and know where freight will be coming into the U.S., when and in what volume to pivot to proactive.
